

Lab worksheet 7: GUI

Instructions

1. Create a Java project in IntelliJ within your folder and name it using your student number in the following formats: **"OOP_CS_2022_XXX" or "OOP_ET_2022_XXX"**. (Eg: OOP_CS_2022_001, OOP_ET_20222_007)
2. Create distinct packages for each lab worksheet, naming them in the following format **"LW_XX."** (Eg: LW_01)
3. Create distinct classes for each question, naming them **"QX."** (Eg: Q1)
4. Upload your project files to your GitHub repository.

Questions

1. Create a **GUI Registration Form** using the Java Swing package. (**Demo Video:** <https://youtu.be/D9USkEWfL3Y>)

The screenshot shows a Java Swing window titled "Registration Form". It contains several input fields: "Name" with the text "Tony Stark", "Mobile" which is empty, "Gender" with radio buttons for "Male" (selected) and "Female", "DOB" with dropdown menus showing "1", "Jan", and "1995", and "Address" which is empty. Below these fields is a checkbox labeled "Accept Terms And Conditions." and two buttons, "Submit" and "Reset". A large white rectangular area on the right side of the form is currently empty.

This screenshot shows the same "Registration Form" window after the data has been submitted. The input fields are now populated: "Name" is "Tony Stark", "Mobile" is "0070070070", "Gender" has "Male" selected, "DOB" shows "30", "May", and "1995", and "Address" contains "Avengers compound, Upstate Newyork, USA.". The "Accept Terms And Conditions." checkbox is now checked. The "Submit" and "Reset" buttons remain. The large white rectangular area on the right now displays the submitted information in a text format: "Name : Tony Stark", "Mobile : 0070070070", "Gender : Male", "DOB : 30/May/1995", "Address : Avengers compound, Upstate Newyork, USA.". At the bottom of the window, the text "Registration Successfully.." is displayed.
